Mokoena Family Homestead - example report

SAMPLE - fictional demonstration data | Generated 2026-09-06

Full report

Executive summary

A demonstration household garden with food-growing space alongside the home and yard.

Mokoena Family Homestead is the Botshabelo, FS example. Its sample register contains 4 adult participants, 85 kg of illustrative produce and 60% training progress.

Sample status: Establishing. Coordinator: Mpho Mokoena.

Prepared 2026-09-06. All figures, observations and people in this garden report are fictional demonstration content.

Site and production area

Garden type: Homestead garden. Sample group language: Sesotho.

Illustrative site boundary area: 450 m².

Vegetable beds: 80 m². Staple plots: 40 m². Total planted area: 120 m².

The remaining site area includes schematic buildings, access, tree areas and other space. It is not automatically available for planting. Areas come from the sample register, not measurements inferred from the photograph.

The map point refers to the Botshabelo, FS area; it is not a surveyed property or a navigation instruction.

Layout and site assessment

The schematic retains the home and yard, with vegetables, a staple area, trees and a water point shown separately.

Illustrative assessment: the garden should fit household routines, available labour and safe access around the home. The site boundary is larger than the planted area.

Illustrative soil review: bed condition and soil management should be considered with water and access. No measured laboratory result is supplied for this example, so no pH, nutrient concentration

or amendment rate is asserted.

The reference photograph illustrates this garden type. Its visible details are not a verified inventory and cannot establish dimensions, ownership, water availability or soil properties.

Water, infrastructure and planting needs

The schematic marks a water point. Its source, storage capacity, reliability and installation status have not been measured in this sample.

Vegetable and staple allocations are recorded separately. Tree symbols indicate planning context; species, number planted, survival and maturity need their own evidence.

Confirm household priorities and water access; record food kept at home separately from donations and sales.

Any water storage or solar proposal needs an appropriate specification, installation plan, costs and maintenance responsibility before it becomes a funded deliverable.

Production, participation and learning

Illustrative harvest total: 85 kg. This is the same total shown in this garden profile. It is not a yield forecast or independently verified result.

4 adult participants are in this example register. The displayed 60% training figure is sample progress, not proof of improved livelihoods.

The catalogue does not provide a common crop-by-crop reporting period for every garden. Do not calculate annual yield, profitability or household savings from these sample totals.

A live report should distinguish produce kept, donated, sold and lost, and use dated attendance and assessments for learning outcomes.

BOQ and funding readiness

Known sample quantity basis: 80 m² of vegetable area and 40 m² of staple area. These allocations are not construction specifications.

This overview has no measured construction quantities or supplier quotations. Unpriced needs are not zero-cost needs; no fictional funding commitment is represented as confirmed.

Assess complete packages where needed: water storage with its base and connections; planting with establishment care; solar equipment with commissioning. Verify quantities and dependencies before pricing.

Keep approved current-project work separate from additional needs outside the budget. The proposed Funding & delivery workflow will connect those needs to costed BOQs and funder allocations; that full workflow is not yet available.

Delivery evidence and next actions

Priority follow-up: confirm establishment tasks, responsible people and the first dated progress check.

At the next visit, ask which tasks were manageable and which beds need support. Household financial or survey details require appropriate access.

Record installed tanks and storage capacity separately from measured water collected. Record commissioned solar capacity separately from energy produced. Record planted trees separately from survival and fruit harvest.

Use dated photos, receipts, visit records and appropriate operational checks. A paid invoice or an AI-generated image does not verify a completed installation.

Report basis and limitations

Snapshot: g16 / 2026-09-06. Source: the shared fictional garden catalogue and its type-specific assessment narrative.

The prepared report is a complete demonstration document, not a professional site survey or a new live AI analysis. It opens without making a paid AI request.

The photograph is AI-generated and the layout is schematic, not to scale. Adult portraits elsewhere in the sample may repeat.

Use the separate Ubhejane workspace for the connected editable farm design. Opening this garden report does not overwrite any real map or report.
