01 Executive summary

A food garden supporting an early learning setting, with adult-managed growing and a separate play space.

Naledi Early Learning Garden is the Botshabelo, FS example. Its register contains 4 adult participants, 70 kg of logged produce and 50% training progress.

Status: Establishing. Coordinator: Palesa Mofokeng.

Prepared 2026-09-06. Tour edition - Prepared records and schematic layouts.

02 Site and production area

Garden type: Crèche garden. Group language: Sesotho.

Site boundary area: 600 m².

Vegetable beds: 72 m². Staple plots: 48 m². Total planted area: 120 m².

The remaining site area includes schematic buildings, access, tree areas and other space. It is not automatically available for planting. Areas come from the tour register, not measurements inferred from the photograph.

The map point refers to the Botshabelo, FS area; it is not a surveyed property or a navigation instruction.

03 Layout and site assessment

The schematic separates the crèche building and play space from vegetables and staple crops. The water point is shown away from the main growing blocks.

Planning considerations: keeping the play area clear and controlling adult access to tools and water are the main design considerations. Food production must fit the daily work of the carers.

Soil planning: bed condition and soil management should be considered with water and access. No measured laboratory result is supplied for this example, so no pH, nutrient concentration or amendment rate is asserted.

The reference photograph illustrates this garden type. Its visible details are not a verified inventory and cannot establish dimensions, ownership, water availability or soil properties.

04 Water, infrastructure and planting needs

The schematic marks a water point. Its source, storage capacity, reliability and installation status have not been measured in this tour.

Vegetable and staple allocations are recorded separately. Tree symbols indicate planning context; species, number planted, survival and maturity need their own evidence.

Review the separation of growing, play and storage spaces. Confirm who maintains the garden during closures and who records produce used in meals.

Any water storage or solar proposal needs an appropriate specification, installation plan, costs and maintenance responsibility before it becomes a funded deliverable.

05 Production, participation and learning

Harvest logged: 70 kg. This is the same total shown in this garden profile. It is not a yield forecast or independently verified result.

4 adult participants are in this example register. The displayed 50% training figure is progress, not proof of improved livelihoods.

The catalogue does not provide a common crop-by-crop reporting period for every garden. Do not calculate annual yield, profitability or household savings from these totals.

A live report should distinguish produce kept, donated, sold and lost, and use dated attendance and assessments for learning outcomes.

06 Orchard bookkeeping example

Worked records for exploring fruit and nut capture; these are separate from the garden profile total above and do not establish planted species or seasonal yields.

Avocado: 24 kg picked; 18 kg sold; 6 kg retained; R360 received.

Lemon: 18 kg picked; 12 kg sold; 6 kg retained; R120 received.

Macadamia: 10 kg picked; 8 kg sold; 2 kg retained; R240 received.

Mango: 30 kg picked; 24 kg sold; 6 kg retained; R360 received.

Marula: 12 kg picked; 6 kg sold; 6 kg retained; R60 received.

Open Records to view the connected harvests, sales and invoices. Orchard quantities can be included or excluded from harvest graphs; orchard income is not divided by vegetable-bed area.

07 BOQ and funding readiness

Known quantity basis: 72 m² of vegetable area and 48 m² of staple area. These allocations are not construction specifications.

This overview has no measured construction quantities or supplier quotations. Unpriced needs are not zero-cost needs; funding commitments require confirmation.

Assess complete packages where needed: water storage with its base and connections; planting with establishment care; solar equipment with commissioning. Verify quantities and dependencies before pricing.

Keep approved current-project work separate from additional needs outside the budget. The proposed Funding & delivery workflow will connect those needs to costed BOQs and funder allocations; that full workflow is not yet available.

08 Delivery evidence and next actions

Priority follow-up: confirm establishment tasks, responsible people and the first dated progress check.

Review the garden with the responsible adult and record any access or maintenance issues before the next reporting period.

Record installed tanks and storage capacity separately from measured water collected. Record commissioned solar capacity separately from energy produced. Record planted trees separately from survival and fruit harvest.

Use dated photos, receipts, visit records and appropriate operational checks. A paid invoice or an AI-generated image does not verify a completed installation.

09 Report basis

Snapshot: g18 / 2026-09-06. Source: the prepared garden catalogue and its type-specific assessment narrative.

Prepared from tour records; no professional site survey or live analysis was performed.

The photograph is AI-generated and the layout is schematic, not to scale. Adult portraits elsewhere in the tour may repeat.

Use the separate Ubhejane workspace for the connected editable farm design. Opening this garden report does not overwrite any real map or report.
