Texas Mission pollen, chill and weight context: Texas Mission is classified high chill and names Nonpareil as pollinator. Its 5 kg/tree production entry does not state tree age, management, trial region or whether weight is kernel or in-shell; it is not a mature annual food forecast.

Texas Mission named production entry: The Texas Mission table's Production (kg/tree) row gives 5 kg/tree. It does not state tree age, reporting period, trial region or whether this means kernels or nuts in shell. Retained as a cultivar source claim to investigate; numeric mature annual kg remains null.

Check the named cultivar's winter needs and compatible pollen before planting. Texas Mission is self-incompatible.

Record whether nut weights mean kernels or nuts in shell; these are different quantities.

Switsundzuxo swo xava: Texas Mission is a documented SAPO cultivar; its sheet names Nonpareil as pollen partner and describes a high chilling requirement. Confirm local suitability with the nursery.
