African swine fever (ASF) is listed as a controlled animal disease pertaining to pigs under the Animal Diseases Act; warthogs and Ornithodorus ticks are carriers/vectors.

Foot-and-mouth disease (FMD) is also listed as a controlled animal disease pertaining to pigs under the Animal Diseases Act.

Swill (food waste) may not be fed to pigs unless it has been boiled for at least 60 minutes or sterilised by another equally effective method.

Pigs may only be moved into a biosecure compartment from another compartment that is officially certified/approved for that purpose.

A pig may not be slaughtered anywhere but a registered abattoir, except for own household consumption or cultural/religious purposes.

Rabbits are one of the domesticated animal species listed in the Meat Safety Act, so the Act's rules on abattoirs and hygiene apply to them, as they do to ducks and other listed species.

Rabbits slaughtered to be sold must be slaughtered at a registered abattoir; slaughter for the farmer's own consumption is exempt from this rule but the meat from it may not be sold.

At the abattoir, rabbits (like other listed animals) must be handled humanely during loading, transport, offloading, housing, immobilising and killing, under the Animals Protection Act.
