African swine fever (ASF) is listed as a controlled animal disease pertaining to pigs under the Animal Diseases Act; warthogs and Ornithodorus ticks are carriers/vectors.

Foot-and-mouth disease (FMD) is also listed as a controlled animal disease pertaining to pigs under the Animal Diseases Act.

Swill (food waste) may not be fed to pigs unless it has been boiled for at least 60 minutes or sterilised by another equally effective method.

Pigs may only be moved into a biosecure compartment from another compartment that is officially certified/approved for that purpose.

A pig may not be slaughtered anywhere but a registered abattoir, except for own household consumption or cultural/religious purposes.

Rabbits are one of the domesticated animal species listed in the Meat Safety Act, so the Act's rules on abattoirs and hygiene apply to them, as they do to ducks and other listed species.

Rabbits slaughtered to be sold must be slaughtered at a registered abattoir; slaughter for the farmer's own consumption is exempt from this rule but the meat from it may not be sold.

At the abattoir, rabbits (like other listed animals) must be handled humanely during loading, transport, offloading, housing, immobilising and killing, under the Animals Protection Act.

Sheep scab is a controlled disease by law: a suspected or positive case must be reported to the State Veterinarian immediately.

Against sheep scab, all small stock on the farm must be treated with a remedy registered under Act 36 of 1947, and infected sheep treated twice, eight to ten days apart.

Every sheep owner must register an official identification mark and mark their sheep with it, under the Animal Identification Act.

A sheep may be slaughtered only at an abattoir, except for the farmer's own consumption or for cultural or religious purposes.

Despite foot-and-mouth disease (FMD) in South Africa, wool exports continue under the inactivation clause of the OIE (World Organisation for Animal Health) rules.

Inside a declared FMD zone, sheep and their products cannot be moved into, out of, or within it without a state veterinary permit.

Sheep scab is a controlled disease by law: a suspected or positive case must be reported to the State Veterinarian immediately.

Danga: Wool sheep (Merino / Dohne Merino, incl. communal wool growers) (zwi khou bvela phaṋa)

Wool from scab-infected sheep must be destroyed rather than sent to the buyer, where it would be marked as scab wool.

Every sheep owner must register an official identification mark and mark their sheep with it, under the Animal Identification Act.

A sheep may be slaughtered only at an abattoir, except for the farmer's own consumption or for cultural or religious purposes.
