

Follow the produce

Use the same unit. Keep the source reference. Compare the book with a separate count.

Begin with **4 kg of carrots already in store**. Follow the cards below in order. Write what remains after each event. The amounts are practice inputs, not a harvest recommendation.

Illustrated context, not evidence.

Source	What happened	Stock left (kg)
Opening	4 kg already here	4
H01	16 kg picked	_____
D01	6 kg delivered for sale	_____
HOME01	2 kg used at home	_____
D02	5 kg delivered for sale	_____
GIFT01	1 kg given away	_____
H02	8 kg picked	_____
LOSS01	1 kg recorded spoilage	_____
D03	4 kg delivered for sale	_____

Separate closing count: 9 kg. Does your book agree? Name one check you still need even if the total agrees.

Try a new case: 10 kg available; 3 kg sold; 2 kg used at home; 4 kg counted at closing. How much is unexplained? What would you check before naming a cause?

Follow the buyer's payment

A delivery, sale and payment can be linked records of one transaction.

READ THESE TWO SOURCE CARDS

S02 - delivery and sale

Day 2

5 kg delivered
Agreed value R100.00

PAY02 - payment

Day 4

R60.00 received in the wallet
For sale S02

Question	Your answer
What was the sale value?	R _____
How much money arrived?	R _____
How much is still owed?	R _____
Delivery day / payment day	_____ / _____

Explain why PAY02 is not another 5 kg sold. Does **paid in full** describe this sale correctly?

TRY A NEW CASE

A sale is R90.00. The buyer pays R30.00. Write the sale value, money received and amount still owed.

App boundary: part-payments need the workbook. Do not mark the whole invoice paid or enter its payment as another sale.

Move money without inventing income

Keep a separate record for each place money is held. Match both sides of a transfer.

MOVE01 - BOTH SIDES ARE COMPLETE

Before the transfer: cash R607.50; wallet R100.00. Move R100.00 from cash to the wallet. Fill the ending balances and the combined amount.

Place	Before	Movement	After
Cash tin	R607.50	- R100.00	R _____
Wallet	R100.00	+ R100.00	R _____
Combined money	R _____	No new money	R _____

What new produce sale occurred? What new expense occurred? Explain your answers using MOVE01.

KEEP A SEPARATE FEE SEPARATE

FEE01 later shows a R2.50 charge paid from the wallet. Which account changes? What source supports it? Do not invent a fee when the evidence does not show one.

TRY A NEW CASE

Move R20.00 between two accounts owned by the practice farm. Does combined money change? If a separate source shows a R1.00 fee, what changes then?

Find the mistake and keep the evidence

Each row is a separate case. Correct only what the source supports.

Source	Altered copy	Correction and reason
PACK01: R12.50 paid	R125.00 paid	
H02: 8 kg weighed	8 bunches	
S02 delivered Day 2; PAY02 paid Day 4	Both entered as Day 4 delivery	
One PAY02 payment	Two PAY02 records	
1 kg unexplained; no cause documented	1 kg stolen	

WRITE ONE CORRECTION NOTE

Record reference: _____ Correction date: _____
Old entry: _____
Correct entry: _____
Source used: _____ Checked by: _____

What remains unknown? A guessed entry that makes the total agree is not an explanation.

TRY IT IN THE SAMPLE FARM

Use a published app guide to save and reopen a practice entry in the same session. Check its amount, unit and source. A full reload resets sample data; it does not test a real account's backup. Do not create a duplicate to retry a save.
